

Configure a new e-mail address

Follow these steps to create a new e-mail address using **the domain** that you have already purchased.

This quick guide applies to both Basic and Enhanced mailboxes and includes steps on:

- updating the DNS for your domain to include our e-mail servers so you can start receiving e-mails
- how to access the Webmail from any browser and send your first e-mail
- how to request a transfer of your e-mail account (e-mail migration) from the previous provider
- what are the Incoming/ Outgoing Server names and ports
- how to set up Autodiscover and Autoconfig
- how to set up the e-mail account on e-mail clients, such as Mozilla Thunderbird, Outlook, Apple Mail, and other e-mail applications
